

Imagine. Create. Inspire. Custom Plastic Planter Boxes

Paneltim®

Plastic Sandwich Construction Panels

Paneltim® is an innovative 50mm thick, dual skin sandwich panel with an internal cross-rib cell structure that is light weight yet offers superior strength and rigidity in both length and width. The panels are easy to weld into any dimension using butt welder, hot air or extrusion welders.

Applications include:

- Planter Boxes
- Swimming Pools
- Bathing Boxes
- Custom Designs

**The possibilities are only limited
by your imagination**

Viking Plastics fabricate and supply custom plastic planter boxes and liners for residential and commercial landscaping.

Viking's planter boxes are fabricated using Paneltim® plastic sandwich construction panels. Liners for planter boxes and ponds are fabricated using 6mm thick polyethylene.

Viking's plastic planter boxes are a lightweight alternative to concrete or steel constructions. Every Viking planter is custom made and can be built to any required dimensions. For long boxes, internal braces are added to ensure the walls remain true when loaded with soil. The boxes can be installed with spacers between each planter to allow for thermal expansion and contraction.

Our customers have clad Viking Plastics' planters in a range of designer finishes including timber, render, decorative contact adhesive and paint. Customers have also installed lighting features in the external cladding to create stunning visual effects. The possibilities are only limited by your imagination!
