

Custom Pool Accessories

Paneltim®

Plastic Sandwich Construction Panels

Paneltim® is an innovative 50mm thick, dual skin sandwich panel with an internal cross-rib cell structure that is light weight yet offers superior strength and rigidity in both length and width. The panels are chemical resistant and easy to weld into any dimension using butt welder, hot air or extrusion welders.

**The possibilities are only limited
by your imagination**

Viking Plastics fabricate and supply custom swimming pool accessories to almost any dimension and specification.

Skimmer Boxes are designed to trap and filter out debris like leaves. Manufactured using PVC, Viking's skimmer boxes are made to suit customer requirements and are sized to suit the pool pump flow rates.

Balance Tanks are designed to store excess water generated from the displacement of swimmer's bodies. A pool with a balance tank maintains a constant depth regardless of how many people are in the pool. A balance tank is a temporary holding vessel that enables a swimming pool to maintain a constant water level – essential for infinity horizon pools. Viking's balance tanks are manufactured using Paneltim® plastic construction panels.

Multi Drum Bunds and Open Tray Bunds are designed to capture spillage of chemicals, such as chlorine, should they leak from their original containment vessel. Bunds help to prevent chemical spills that could cause damage to the environment and people. Viking uses high density polyethylene, PVC or Paneltim® to manufacture bunds.
